PROJECTS

Cafeteria Management System

The purpose of Cafeteria Management System website is that it is useful for the employees who like to order the food without going to cafe and waiting for the order. It provides the complete information about the items present in the cafeteria which is very useful for the employees to manage the Time. The main objective of this project is to provide the better efficiency, accuracy and feasibility.

Technologies used- HTML, CSS, JS, PHP, SQL

Inventory Management System

The main aim of this project is the development of application which enables the students of the college to raise the complaint to the management and also can request the needs from the management. Scope of this project is clear to give the simple application to simplify the work as well as reduce the efforts while maintaining college.

EXPERIENCE

Cryptography Techniques

A dynamic webpage which consists of some of the encryption and decryption techniques. The user can give the plain text and a key it will give the cipher text and vice versa
